SUMMARY

Full Stack Developer with 4+ years of experience building enterprise web applications in Angular and TypeScript, backed by REST APIs in ASP.NET Core Web API (C#, LINQ, Swagger) and Node.js. Experienced with SQL Server and stored procedures, Angular monorepo and shared library architecture, and JWT-based authentication. Currently delivering a healthcare SaaS platform end to end.

EDUCATION

JAIN (Deemed-to-be University) <i>Master of Computer Applications (MCA)</i>	Bengaluru, India 2023 – 2025
Veer Narmad South Gujarat University <i>Bachelor of Computer Applications (BCA)</i>	Surat, India 2020 – 2023

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, SQL, C++, C
Backend: ASP.NET Core Web API (.NET 6), LINQ, Dependency Injection, Middleware, Swagger/OpenAPI, REST API Design, Node.js, Express.js
Frontend: Angular, RxJS, Angular Libraries, Monorepo Architecture, HTML, CSS, SCSS, Bootstrap, NgBootstrap
Databases: SQL Server (SSMS, Stored Procedures), MongoDB (Mongoose)
Concepts: Object-Oriented Programming (OOP), JWT Authentication & Role-Based Access Control, Real-time Communication (WebSockets), Unit & End-to-End (E2E) Testing
Developer Tools: Git, GitLab, Visual Studio, VS Code, SSMS, Postman, Swagger, Playwright, Cursor, Claude

EXPERIENCE

Full Stack Developer <i>Lifemaan</i>	Aug 2025 – Present Surat, India
- Building a Hospital Management System (SaaS) in the healthcare domain, working end to end across an Angular frontend and a Node.js/Express REST API; moved from frontend into full stack ownership in March 2026 - Designed and implemented RESTful APIs in Node.js and Express, covering request validation, authentication, error handling, and consistent response contracts - Modeled and maintained MongoDB collections with Mongoose, including schema design, indexing, and aggregation pipelines for reporting-heavy screens - Built a role-based permission module with token-based authentication, enforcing secure, permission-driven access across both the UI and the API - Designed and implemented an advanced printing module with real-time preview, ensuring accurate print output identical to on-screen rendering - Worked in an Angular monorepo built on a shared library architecture, developing and maintaining reusable component and feature libraries consumed across the platform to improve consistency and development speed - Improved performance across the stack by optimizing database queries and indexes and reducing unnecessary API calls from the client - Debugged production issues across the stack, tracing defects from the UI through the API and data layers to deliver verified fixes	
Angular Developer <i>KeyPress IT Solution</i>	Sep 2023 – Aug 2025 Surat, India
- Developed and maintained dynamic single-page applications for casino-based platforms using Angular, JavaScript, and TypeScript - Implemented WebSocket-based real-time communication for live data updates and improved interactivity - Improved application performance by optimizing components and reducing unnecessary API calls - Began moving into backend development by learning ASP.NET Core Web API and writing stored procedures in SQL Server (SSMS) to support application data needs - Collaborated with cross-functional teams to build scalable, maintainable solutions and improve development standards	

Junior Software Developer

May 2022 – Apr 2023

Actoscript

Surat, India

- Developed responsive web applications using HTML, CSS, Bootstrap, and JavaScript
- Translated UI/UX designs into clean and maintainable frontend code
- Improved usability and layout consistency across different devices and screen sizes

PROJECTS

Online Bookstore Application | *ASP.NET Core Web API (.NET 6), C#, LINQ, SQL Server, Angular, JWT*

- Built a full-stack bookstore application on an ASP.NET Core Web API backend with an Angular frontend for browsing and purchasing books
- Implemented JWT-based authentication and authorization, issuing signed tokens on login and validating them through authentication middleware to protect API endpoints
- Structured the API around built-in dependency injection, registering services and repositories to keep controllers thin and testable
- Wrote LINQ queries to filter, project, and shape data from SQL Server, and documented and tested all endpoints using Swagger (OpenAPI)
- Secured routes by user role and handled token storage and attachment on the client using an Angular HTTP interceptor
- Developed product listing, search, and order management features with a responsive, user-friendly interface
